```python
import random
print("welcome to the game\n")
names = input("please enter the names tha you want saperated by comma\n").split(",")
print(f"the name i choosed is'{random.choice(names)}")
print("now you need to give more informations about you")
age = input("how old are you\n")
full_name = input("give me please your full name_n")
print("ok good now we gonna move to the second lists of name\n")
names_two = input("please enter your second list of names\n")
print(f"my second choice of the second list  is{random.choice(names_two)}")
print("now you need to give me more informations\n")
age_two = input("how old are you please\n")
full_name_two = input("give me please your full name\n")
print("ok now will move on to the last choice and then will anounce the winner\n")
names_three = input("pleas enter your list of name saperated by comma")
print(f"my three choice of this list of names i {random.choice(names_three)}")
print("you need to give me informations about you\n")
age = input("how old are you please\n")
full_name_three = input("please enter your full name \n")
the_last_choice = input("please now you need to give the three names that you've chosen before")
print("and we will make a winner by them \n")
print(f"ok the winner is {random.choice(the_last_choice)}" )
print(f"congratulations mr {random.choice(the_last_choice)}")
```
