```python
import random
print("in this game we gonna choose three patners form diffrent names\n")
names_1 = ["khalid" ,"said" ,"taha"]
print("the one the computer will chose will be your patner\n")
choice_1 = (f" {random.choice(names_1)}")
print(choice_1)
print(f"please mr {choice_1} is it your turn to choose now\n")
print("we gonna give you three names you need to pick one\n")
names_2 = ["mohsin" ,"fahd" ,"simo"]
print(names_2)
print("choose one\n")
choice_2 = (f" {random.choice(names_2)}")
print(choice_2)
print(f"mr {choice_2} is it your turn to choose now\n ")
print("wil give you also three names and you have to pick one\n")
names_3 = ["khadija" ,"majda" ,"soukayna"]
print(names_3)
choice_3 = (f" {random.choice(names_3)}")
print(choice_3)
print(f" miss {choice_3} you the last one who is going to choose\n")
names_4 = ["houriya" ,"oumayma" ,"saida"]
print(names_4)
print("please choose one\n")
choice_4 = (f" {random.choice(names_4)}")
print(f"the last partner is{choice_4}")
print("good job everyone")
```
